

GM Global EPC Updates are Here!

We are pleased to announce the following exciting updates to the GM Global EPC. You will see them on the web-delivered EPC via Global Connect on February 17, 2023. The locally hosted USB media will be mailed on March 3, 2023. As always, we are grateful for your input, which has powered these changes. So, keep the suggestions coming as we work together to develop future improvements!

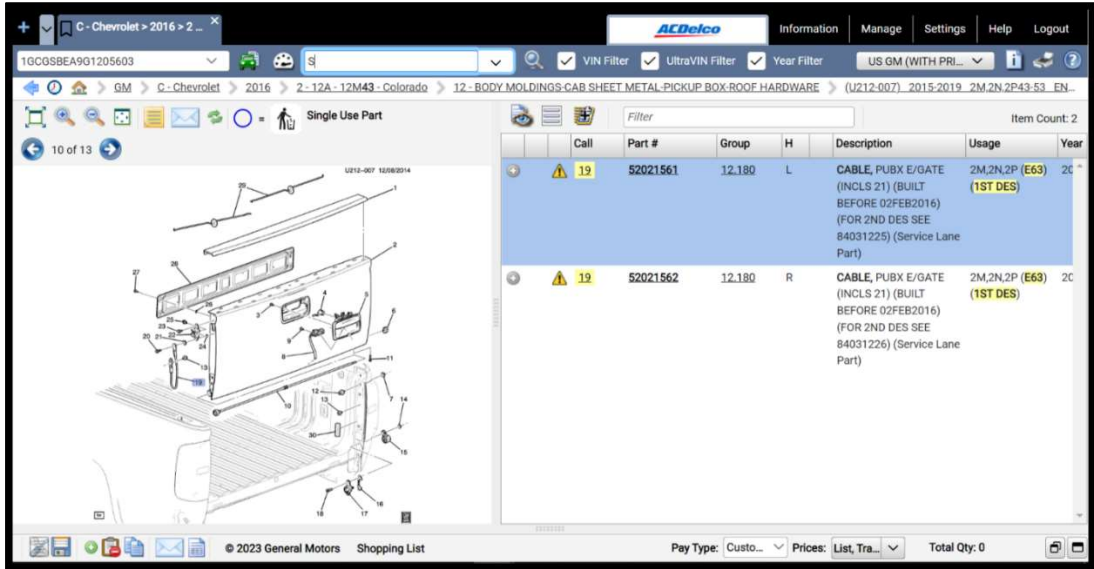

Production Date Filtering

Production Dates are often found in Part Descriptions. Where those exist and with a VIN entered, the GM EPC will now filter out non-applicable parts.

For example, with the old filtering there are two left hand parts and two right hand parts displayed - with all filters turned on.

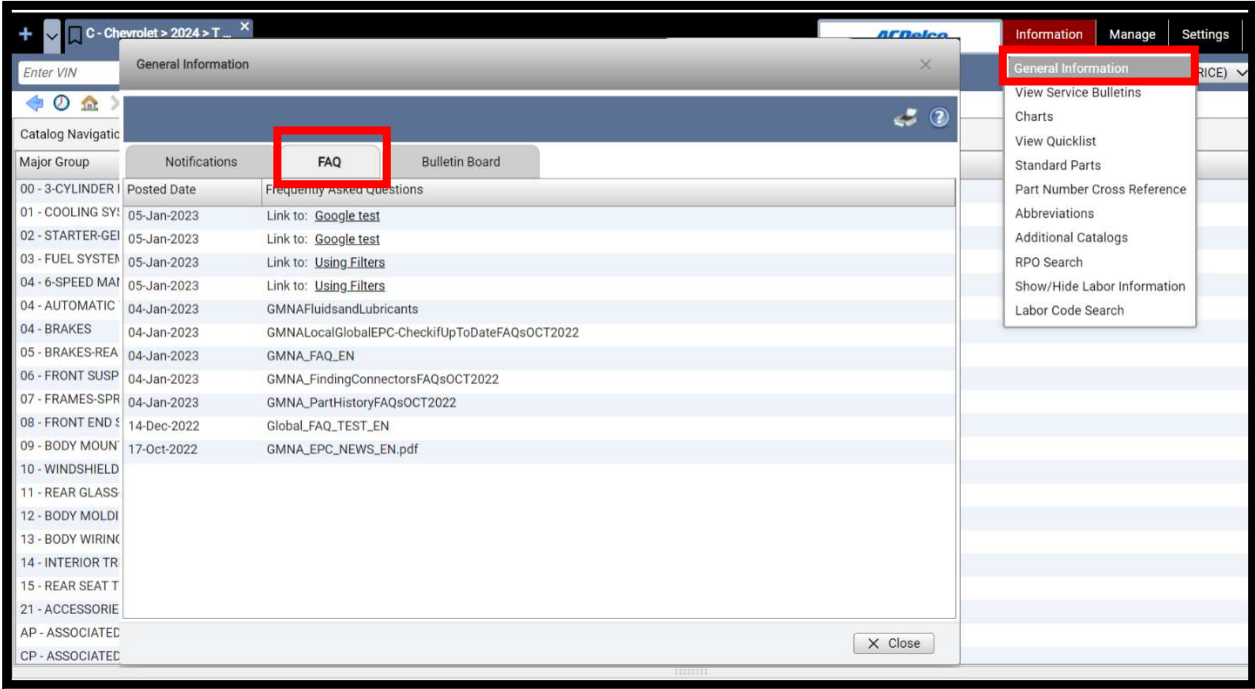

With the new Production Date Filtering, this same part now displays only the correct left and right hand parts.

FAQ Improvements

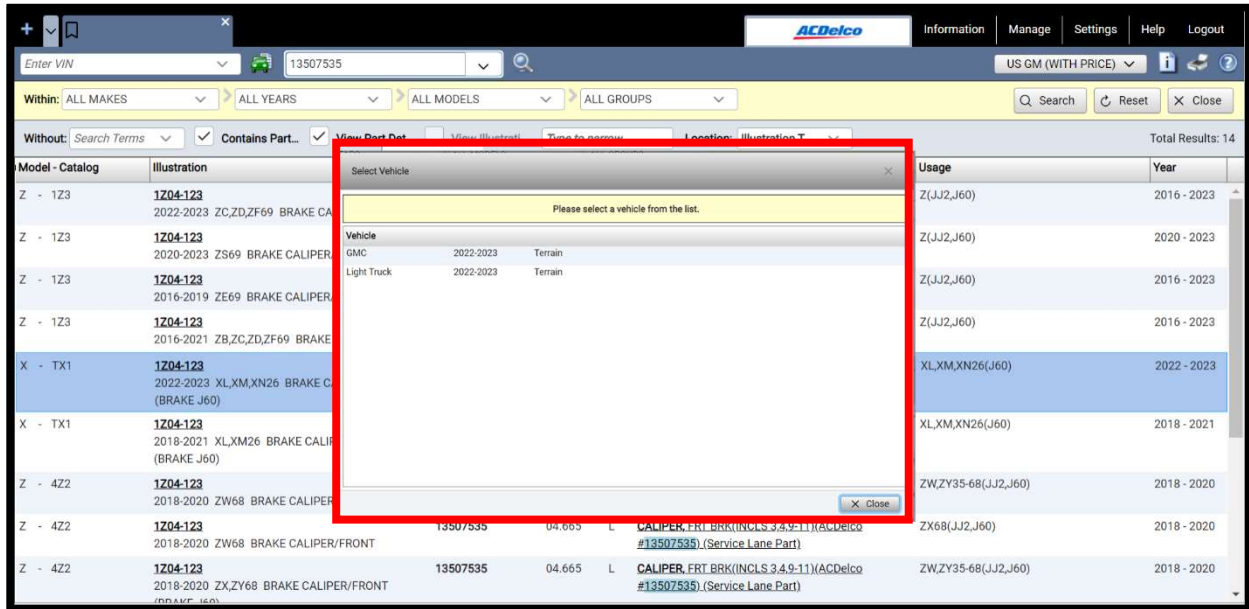

The FAQ section has new content! As we identify the need to share information with you, it will be located here. Check back regularly for important updates. To access the FAQ section, select the Frequently Asked Questions button on toolbar next to the print and help buttons - or - Select *General Information* from the *Information* dropdown. Then click on the *FAQ* tab.

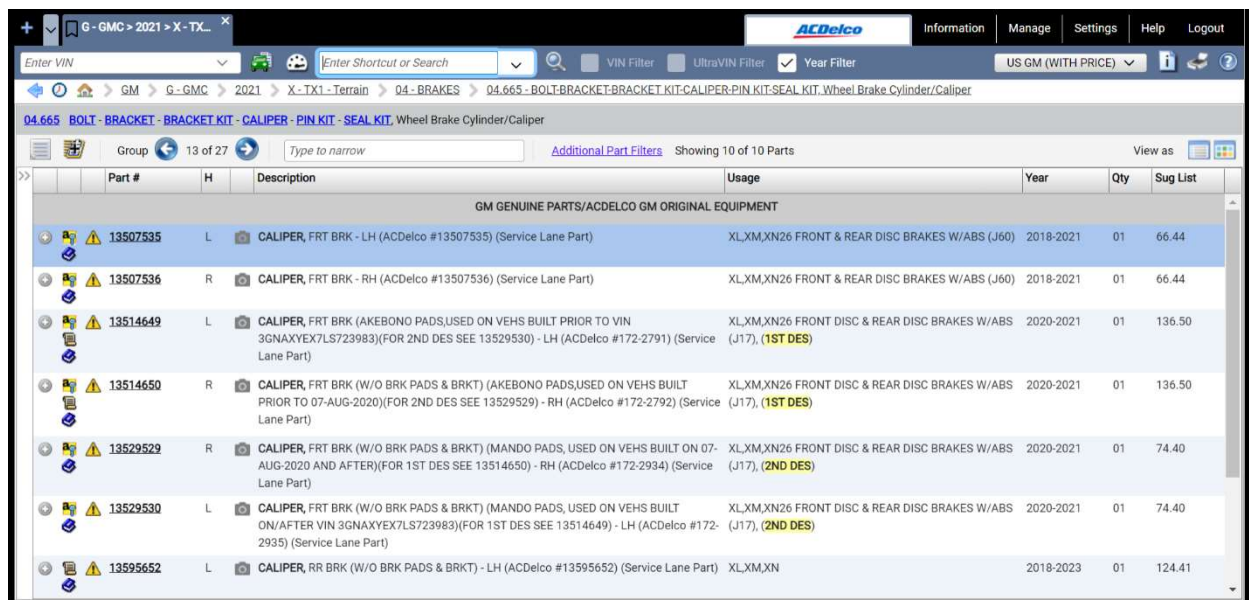

Auto Select Primary Make

When performing a global part search, often two catalog options are shown. However, both selections bring you to the same catalog, just using different navigation. Since the catalog is the same, the GM EPC will eliminate the extra step and auto-select the primary make.

This is the older, longer way of multiple catalog options being displayed.

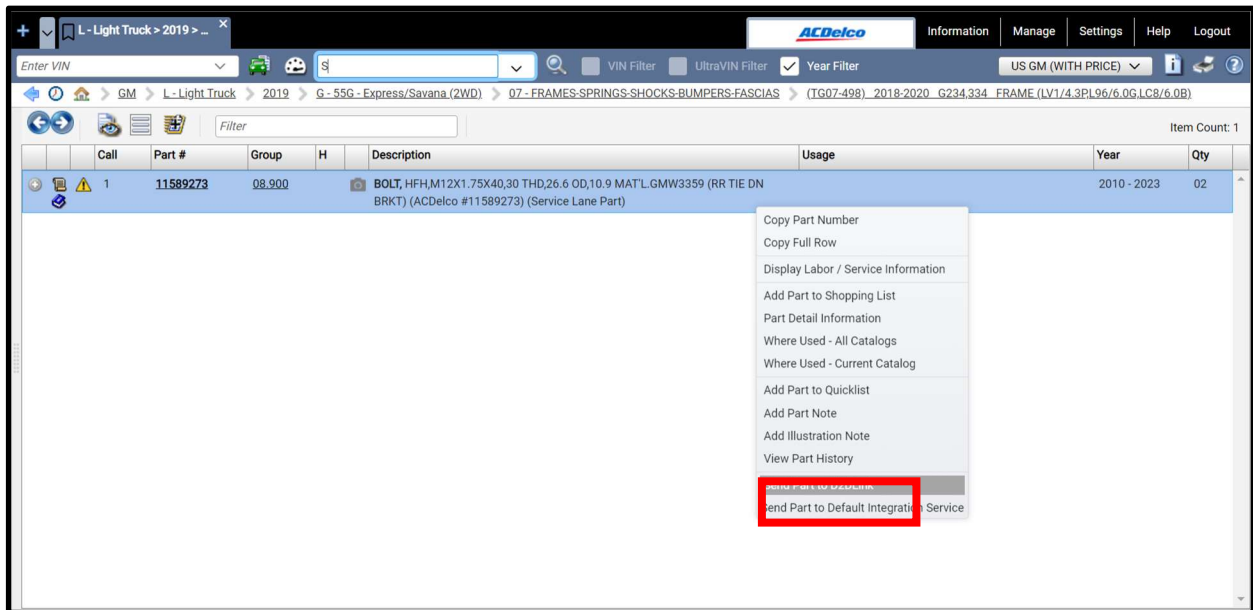

With the new Auto Select Primary Make, the *Select Vehicle* window no longer displays and the GM EPC automatically displays the primary make.

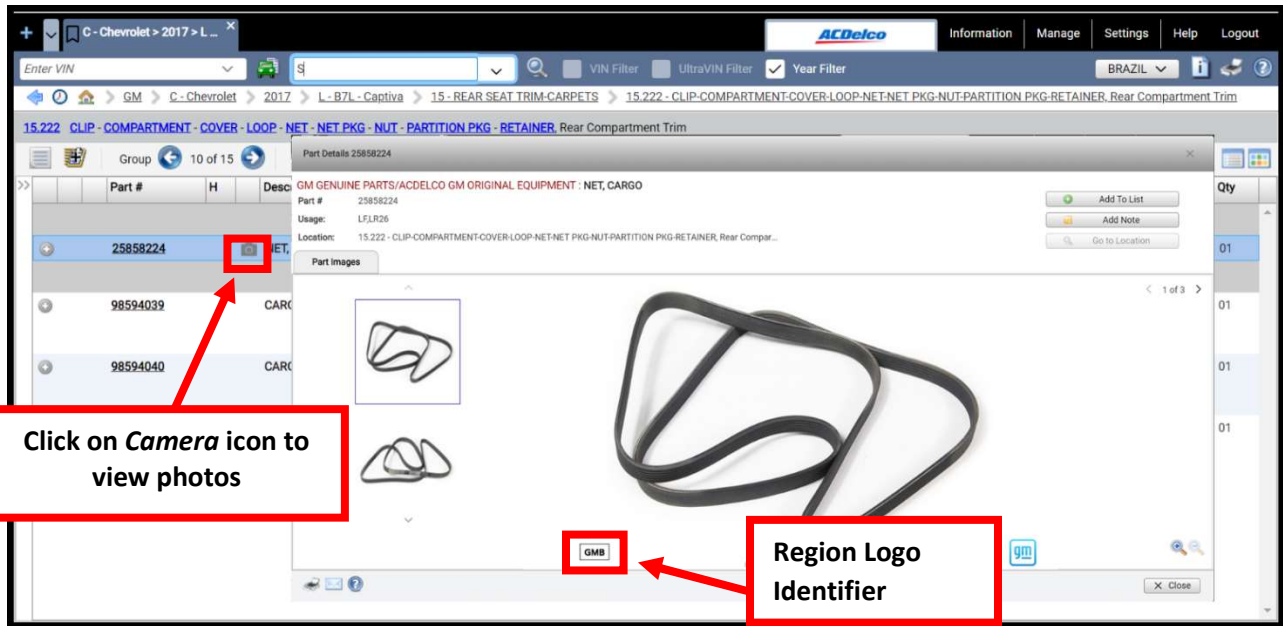

D2DLink Integration for US and Canada

Snap-on and OEConnection have reached an agreement to offer parts lists transfer from GM EPC to the D2DLink website. Contact Snap-on sales for more information.

Regional Part Photos

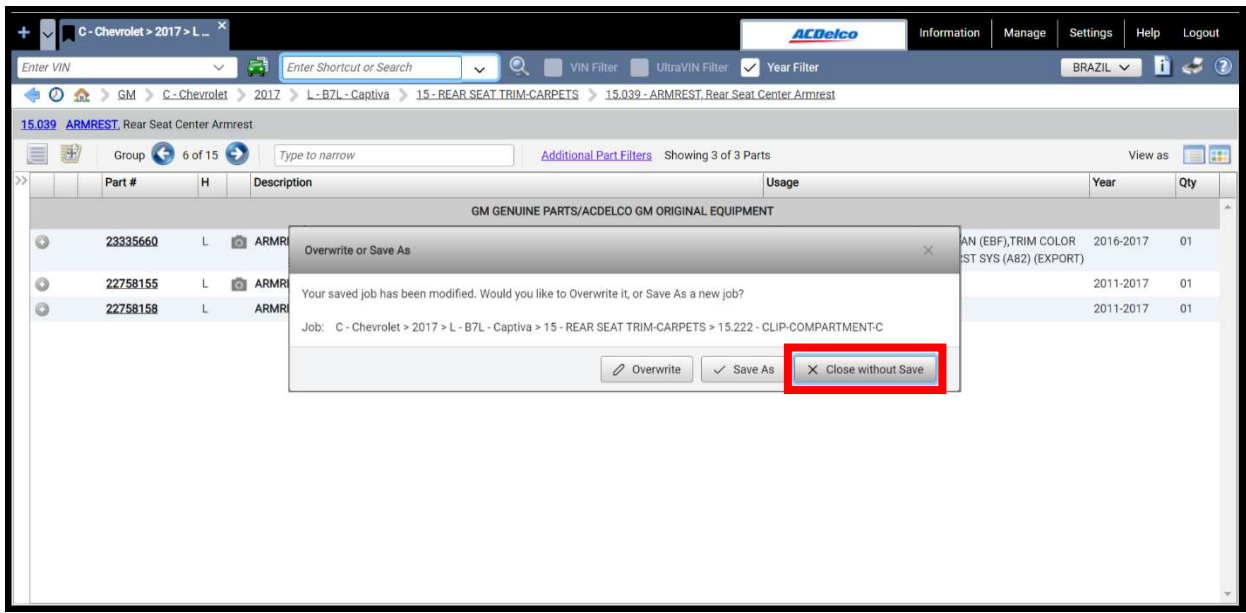

Each GM region can now take and submit their own preferred part photos. This will greatly expand the set of available part photos for everyone. To view photos, click on the camera icon next to the Part Description. Regional Part Photos will have a watermark at the bottom that identifies the source region of the photo.

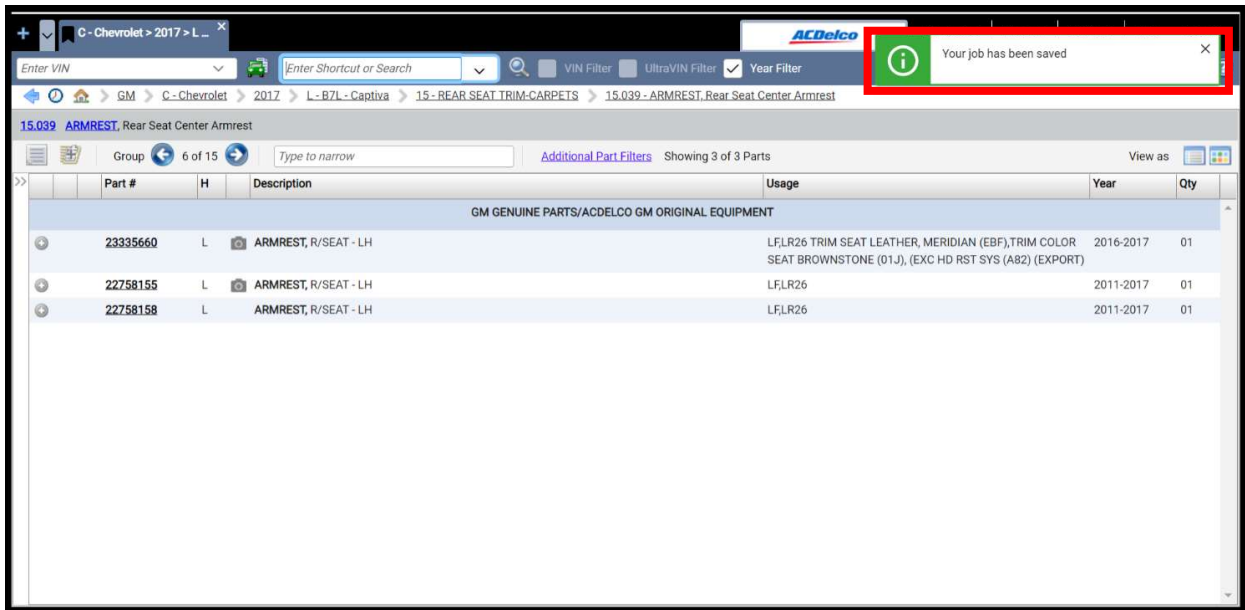

Improvement to Jobs

The Jobs feature has become a bit friendlier with minor updates to prompts that better communicate what happens when closing and renaming previously saved Jobs.

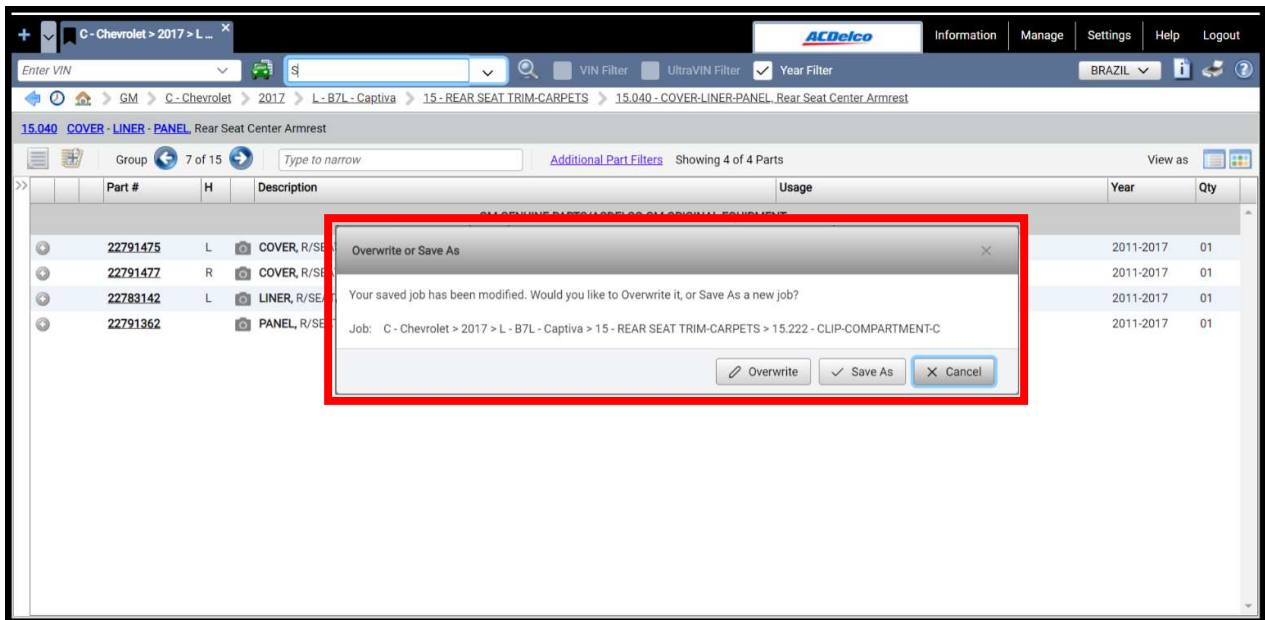

Previously, when clicking the *Cancel* button, the Job would close without saving. To clarify what is actually happening, the *Cancel* button was renamed to *Close without Save*.

When you're working with a saved job and make a change, you can click the Bookmark on the job tab to overwrite the existing saved job. Presently, the GM EPC simply overwrites the saved job and confirms successful completion.

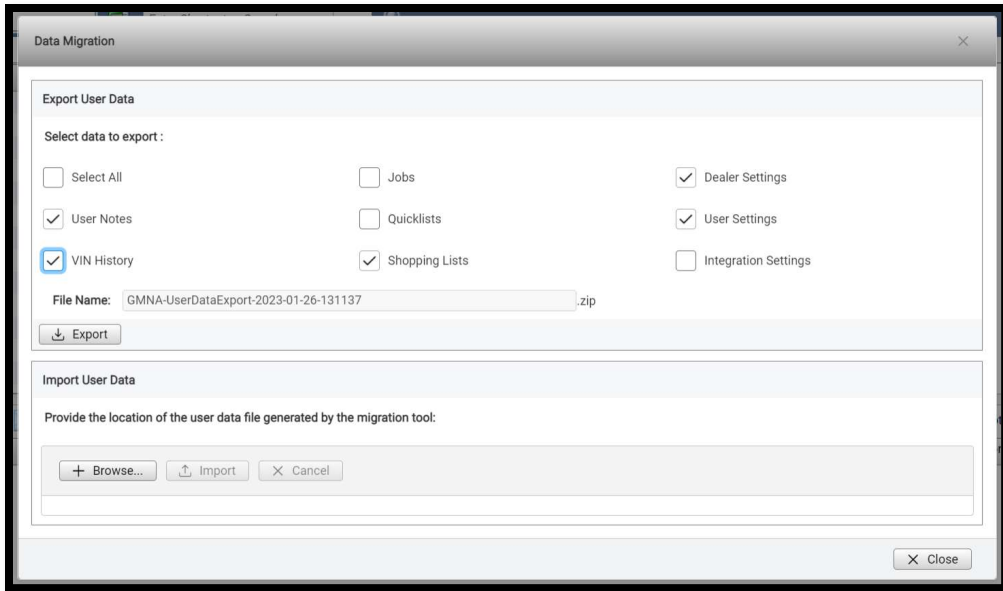

Now, the GM EPC will give you more options when you overwrite a saved job. You can overwrite (current default), Save As a new Job, or cancel and return to the GM EPC without changes.

Data Migration Improvements

The GM Global EPC will now support the migration of more of your personal content to the web.

Select *Manage, Data Migration* to see the improvements:

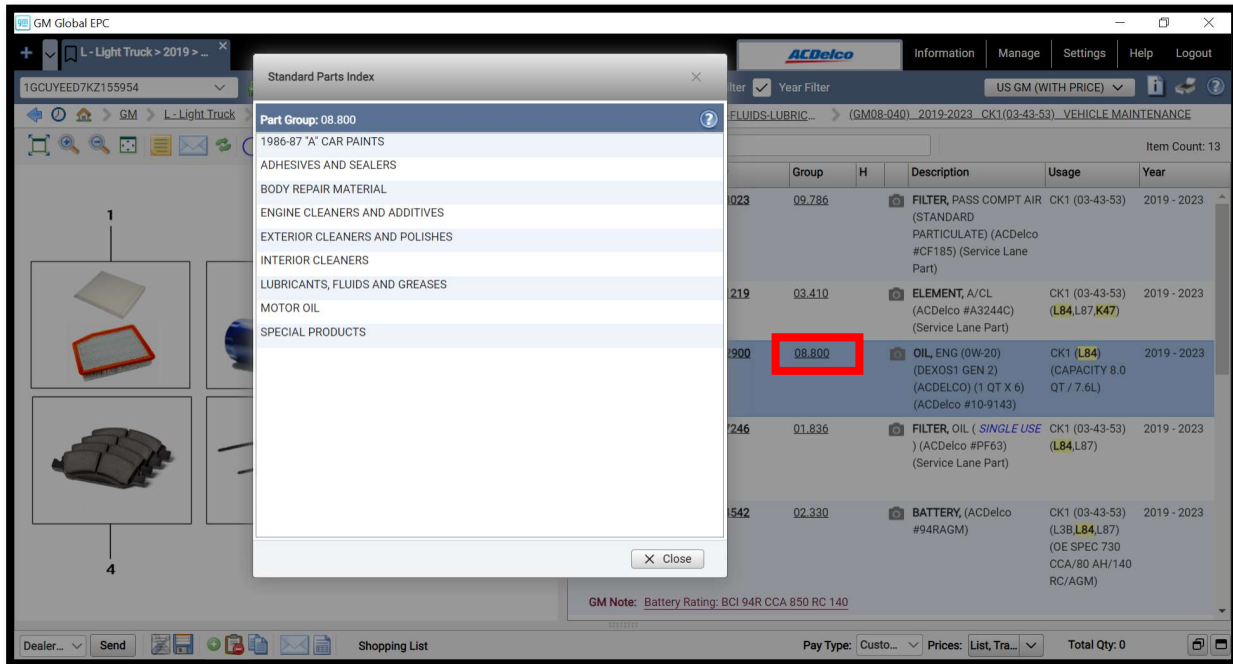

Additional information you can migrate includes Jobs, Quicklists, Shopping Lists, Dealer Settings, and User Settings!

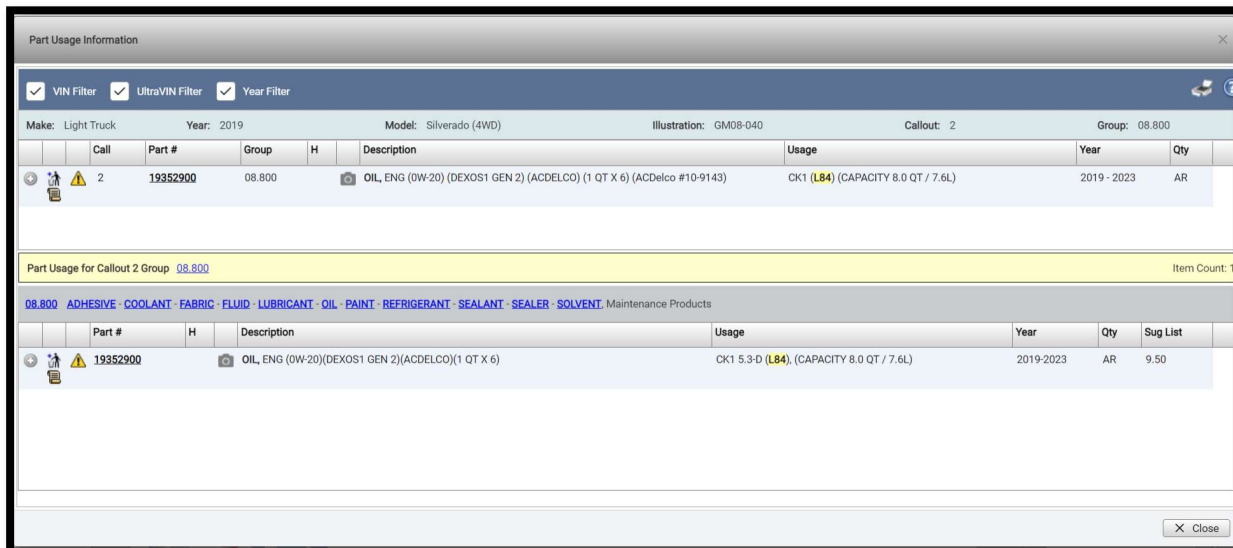

All of the selected items for export will now be placed into one export file for import to the web. Until now, each item was its own export file. Each was imported separately. We've streamlined that process to make the migration much easier.

Access to Group 8.800 from Illustrations

Accessing group 8.800 from the illustration has become easier. Before the update, selecting group 8.800 from the illustrated part text would open the Standard Parts Index.

Going forward, you will get access to the part usage information – consistent with all other part group links that are found on illustrations.

Windows 11 Professional Support

Beginning with the February web – March media update, the GM Global EPC will offer support for new workstation purchases and operating system upgrades where Windows 11 Professional is installed.

See the GM Dealership Infrastructure Guidelines for additional hardware requirements. Search for “DISG” on Global Connect for the latest information.

Thank You!

For technical concerns, please call the GM EPC Technical Support help desk at **888-994-6372** or sbs_services@snapon.com.

Do you have EPC enhancement suggestions? Data Issues? "We're listening!" Please send us your feedback from the EPC by selecting **Help** -> **Contact Us**, then send your comments to gmpartscatalog@gm.com.
